

Studio

LESSON 05 · OVERVIEW — LYZR OVERVIEW & OFFERINGS

What you'll learn

- Explore the SaaS UI dashboard of Lyzr Studio.
- Learn how to build and configure agents in a low-code visual interface.
- Understand the equivalence between UI actions, API endpoints, and SDK code.

Key concepts

Lyzr Studio is a low-code SaaS interface for creating and managing agents. It serves as the primary workspace for business users and developers to orchestrate agent behaviors visually.

Every action performed in the Studio UI is fully mapped to APIs and SDKs. You can build agents by clicking buttons in the dashboard, invoking REST endpoints, or writing Python code using the Lyzr SDK.

Studio streamlines the creation of knowledge bases and tool integrations. Instead of writing database connectors, users can manage grounding knowledge and custom tools via simple visual panels.

TAKEAWAY

Lyzr Studio is a low-code SaaS interface for creating and managing agents.

TAKEAWAY

Every action performed in the Studio UI is fully mapped to APIs and SDKs.

TAKEAWAY

Studio streamlines the creation of knowledge bases and tool integrations.

In Studio

- Explore the Studio home screen, showing the agents list, knowledge bases, and tool panels.
- Walk through the visual creation of a new agent, setting its role, goal, and system instructions.

TRY THIS

- 1** Navigate to the Studio homepage and look at the list of active agents and knowledge assets.
- 2** Create a test agent in the UI and write down its equivalent configuration using the Lyzr SDK.
